

RESCUE LAMB & KID

Complete Colostrum Replacer

You have one chance to start your lambs & kids right.

Ensuring they consume enough colostrum in the 24 hours following birth is critical to their survival. But sometimes you have multiples or orphans, or there just isn't enough colostrum to go around. LIFELINE Rescue Lamb & Kid is a high-level colostrum replacer that delivers energy plus 88 grams of total protein (based on body weight) to ensure your newborns *thrive*.

+ 24% added fat and carbohydrates

🐐 Concentrated for tiny bellies

✓ Functional proteins for growth

🥄 Smooth, easy mixing with warm water

Formulated especially for tiny bellies

Rescue Lamb & Kid is the only serum-based colostrum replacer specifically for newborn lambs and kids. Made from natural bovine serum, the highly concentrated powder delivers complete nutrition in small feedings that are easy for baby animals to eat and digest.

Feed Rescue Lamb & Kid:

- To preemies, multiples and orphans
- During extreme weather or stressful conditions
- When colostrum is in short supply

Feeding Directions

Body weight will determine the amount of Rescue Lamb & Kid to feed. Begin feedings as soon as possible following birth and give 18 grams of powder per pound of body weight over 24 hours. Use the chart as a guide:

FOR EACH FEEDING, MIX 1/4 CUP (25 g) OF POWDER INTO 4 OUNCES OF WATER	BODY WEIGHT IN POUNDS	NUMBER OF FEEDINGS
	4	3
	6	5
	8	6
	10	8

For example, an average 10 lb lamb would receive:

- 2 cups powder
- 32 oz water
- Over first 24 hours

Mix Rescue Lamb & Kid into warm (105°F) water. Stir until the powder is completely dissolved and feed to the lamb or kid via nipple feeder or esophageal feeder. Only mix enough Rescue Lamb & Kid for one feeding at a time.

To feed as a supplement:

Mix 2 tablespoons of powder into 2 ounces of water. Feed in addition to colostrum. When used as a supplement, one tub (1.3 lb) feeds 6–14 animals.

Packaging

- 1.1 lb (500 g) single-feeding pouch
- SKU 60096 – single pouch
- SKU 60190 – six-pack case

RESCUE™ LAMB & KID

Complete Colostrum Replacer

Frequently Asked Questions

What is LIFELINE Rescue?

Rescue is a high-level colostrum replacer produced from high-quality, nutrient-rich plasma. Rescue provides 150 grams of globulin protein in a single feeding, plus fat, carbohydrates, vitamins and minerals. Rescue is the ideal choice for high-value calves, including those from registered herds, embryo transfer calves and show animals.

What exactly is a colostrum replacer?

A colostrum replacer is a powdered product that completely replaces maternal colostrum in a single feeding and offers a complete nutritional profile including a minimum of 100 grams of globulin protein, fat, carbohydrates, vitamins and minerals. A colostrum replacer is mixed with water and fed to a calf *in place of* maternal colostrum in the first hours of life.

How is Rescue different from other colostrum replacers?

Most colostrum replacers are made from dried bovine colostrum powder. Rescue is made from *nutrient-rich plasma*, the most highly researched source of globulin protein in a colostrum replacer. A single, 2-quart feeding of Rescue provides 150 grams of globulin protein, plus nutrients and energy calves need at birth.

Does Rescue have only globulin protein to offer the calf?

In addition to globulin protein, Rescue contains additional functional proteins from plasma, plus a researched blend of carbohydrates, fat, vitamins and minerals that help meet the nutritional needs of newborn calves.

When should Rescue be fed?

Rescue is the first feeding and has its greatest impact when fed within 4 hours of birth. Occasionally a second feeding of Rescue is needed, and can be given 8 to 12 hours after the first feeding. Ideally, all feedings of Rescue should be completed within 24 hours of birth.

Can I feed Rescue if the calf is over 24 hours old?

There is no harm in feeding Rescue after 24 hours of age, but the greatest benefits of Rescue are seen when it is fed in the first few hours following birth.

Can Rescue be fed to calves along with maternal colostrum?

Rescue is designed to *replace* maternal colostrum. LIFELINE Protect is a colostrum supplement that can be fed in addition to maternal colostrum.

Why use a colostrum replacer instead of a colostrum supplement?

A colostrum replacer gives calves the *complete* nutrition they need when high-quality maternal colostrum is not available. A colostrum replacer delivers a higher concentration of globulin protein than a colostrum supplement, as well as fat, vitamins and minerals that meet the nutrient requirements of newborn calves. A colostrum replacer is a clean, consistent and reliable product to use in place of maternal colostrum.

Should Rescue be added to colostrum, milk or milk replacer?

Rescue should be mixed into warm water *only* and fed to the calf as its very first meal.

How well does Rescue mix in water?

Rescue is one of the best mixing colostrum replacers on the market. It should be added to warm (105°F) water with continuous agitation by wire whisk or mechanical mixer. Feed Rescue to calves once it has reached a smooth consistency and all lumps are gone. Do not mix Rescue in water hotter than 140°F, as high temperatures may damage the functional proteins.

What is the shelf life of Rescue?

Rescue has a 36-month shelf life when stored unopened in a cool, dry place at a temperature of 50°–86°F. Once the powder is exposed to air, it has a very short shelf life and should be used within a few days. Once Rescue is mixed with water, it should be immediately used and never stored.

Why should I buy Nourish over other colostrum replacer products?

Rescue was among the first colostrum replacers on the market in the U.S. and has been *proven* effective through extensive testing by ANNUSO, independent universities and large calf operations across the country. No other colostrum replacer on the market has been more highly researched and tested. Rescue is viewed as a trustworthy product by discriminating calf raisers who tell us they *quickly* see lively, vibrant calves.
